

Jeffrey Wang

Los Angeles, CA | (323) 804-2198 | jeffreywang.vercel.app | jeffw3558@berkeley.edu

EDUCATION

University of California, Berkeley

Expected Graduation: May 2027

BA Data Science and Economics (Data Scholars)

Berkeley, California

Relevant Coursework: OOP & Data Structures, Structure and Interpretation of Computer Programs, Linear Algebra, Data Mining, Multivariable Calculus, Principles of Data Science, Discrete Math & Probability Theory, Introduction to Artificial Intelligence

TECHNICAL SKILLS

Languages: Python, Java, HTML/CSS, SQL, LaTeX, Scheme Lisp, JavaScript, Regex, Next.js, PostgreSQL,

Tools and Frameworks: Git, Docker, MongoDB, AWS, React, Node.js, Postman, NumPy, Pandas

EXPERIENCE

CME Group

August 2025 - May 2026

Software AI Research Intern

Chicago, IL

- Designed and presented an AI-driven “Fantasy Futures” product concept for ESPN/CME, combining market data, gamification, and educational UX to engage Gen Z/Millennial retail users.
- Conducted quantitative and qualitative research on fantasy and sports-betting partners (ESPN Fantasy, ESPN BET, FanDuel, Dream11), building revenue models, risk assessments, and partnership playbooks to inform CME’s retail strategy.
- Collaborated with cross-functional teams to translate complex derivatives concepts into accessible simulations and dashboards, aligning product ideas with CME’s compliance, branding, and educational objectives.

Broctagon Fintech Group

May 2025 - July 2025

Software Development Engineer Intern

Singapore

- Built a Python-based testing framework for evaluating Amazon Bedrock LLMs (Claude) across financial NLP tasks; implemented dynamic prompt generation, structured output parsing, and automated failure logging.
- Wrote modular call functions to transmit real-time data to Bedrock models, integrating robust error handling, retry logic, and streaming response support to ensure low-latency performance within a FastAPI backend.
- Compared Bedrock LLMs through custom benchmarks and prompt tuning, evaluating performance metrics (accuracy, cost, stability) to guide model selection for regulatory and client-facing use cases.

Propulsion AI

May 2024 - August 2024

Software Engineering Intern

Berkeley, CA

- Detected and parsed data for irregularities for analysis and supported LLM-driven testing- relevant to surveillance alert generation
- Integrated GROBID, a machine learning library, with LLMs to enhance PDF processing within a FastAPI framework.
- Wrote a Python call function to send real-time data to language models (LLMs). Implemented dynamic request construction, robust error handling, and response parsing to ensure efficient, real-time data processing and integration into the application.
- Utilized Docker to containerize GROBID for consistent deployment and scalability.

University of California, Berkeley

August 2023 - December 2023

Computer Science Lab Assistant

Berkeley, CA

- Guided and mentored instructors in conducting comprehensive reviews of lecture material; facilitated student understanding of function and object-oriented programming assignments in lab sessions, resulting in an increase in assignment completion rates and improved student performance.
- Maintained real-time awareness of student performance patterns and flagged irregular submissions.

LEADERSHIP

SBC Strategy Consulting

May 2025-Present

Senior Consultant

Berkeley, CA

- Premier student-run strategy consultancy at UC Berkeley that provides business solutions to clients of all growth stages, ranging from seed to Fortune 500 companies. Consulted for CME Group and Adidas.
- Completed overseas marketing research for east-asian demographics to help Adidas target new products and marketing expenses.

Taiwanese American Student Association

August 2025-Present

Internal Vice President

Berkeley, CA

- Coordinated two TASA executive board retreats for 35+ members; managed venue scouting, transportation logistics, and budgets.
- Facilitated weekly executive board meetings, oversaw the internal budget allocation, and maintained accountability.

PROJECTS

Autonomous Net-Worth Dashboard & AI Financial Advisor | *Next.js, React, Python, PostgreSQL, OpenAI API* **2026**

- Designed a financial dashboard connecting banking, credit, and investment accounts via Plaid and SnapTrade.
- Implemented an LLM-powered financial engine that securely analyzes financial data to deliver actionable financial optimizations.
- Designed a modern Next.js front-end with interactive, data-dense financial charting libraries and automated, secure background sync cron-jobs.
