

Jeffrey Wang

Los Angeles, CA | (323) 804-2198 | [linkedin.com/in/jeffreywangg](https://www.linkedin.com/in/jeffreywangg) | jeffw3558@berkeley.edu

EDUCATION

University of California, Berkeley

Expected 2027

Bachelor of Arts in Data Science & Economics

Berkeley, CA

- Coursework: OOP & Data Structures, Structure & Interpretation of Computer Programs, Algorithms, Discrete Math & Probability Theory, Artificial Intelligence, Machine Learning, Principles & Techniques of Data Science, Data Mining & Analytics, Linear Algebra, Multivariable Calculus

TECHNICAL SKILLS

Languages: Python, Java, C/C++, Assembly, JavaScript, TypeScript, HTML/CSS, LaTeX, Scheme, SQL

Tools and Frameworks: Git, Docker, React, Node.js, PostgreSQL, MongoDB, AWS Lambda, Firestore, Postman, NumPy, pandas, Firebase, PyTorch, TensorFlow, Flask, agile, Rest API, pandas, NumPy, Matplotlib, Google Cloud, Next.js, Express.js

EXPERIENCE

Technical Product Management Consultant

May 2026 – August 2026

CME Group

Chicago, IL

- Designed Figma prototype for AI-driven trading product integrating market data, gamification, and educational UX
- Built revenue models and partnership analyses across 4+ fantasy sports platforms to inform CME retail strategy
- Developed interactive derivatives simulations and dashboards to simplify complex financial concepts for users

Software Engineer Intern

May 2025 – August 2026

Broctagon Fintech Group

Singapore

- Built Python framework to benchmark Amazon Bedrock Claude LLMs with automated prompts, parsing, and failure logging
- Developed FastAPI LLM pipeline supporting 1K+ live requests with streaming responses, retry logic, and error handling
- Benchmarked LLM accuracy, cost, and stability to guide model selection for financial NLP applications

Software Engineer Intern

May 2024 – August 2024

Propulsion AI

Berkeley, CA

- Developed LLM-driven testing pipeline to detect data irregularities and support surveillance alert generation
- Integrated GROBID with FastAPI and LLM APIs to automate PDF processing workflows across 500+ documents
- Built Python LLM API pipeline with dynamic requests and error handling, reducing response processing time by 35%

Computer Science Teaching Assistant

January 2024 – May 2024

University of California, Berkeley

Berkeley, CA

- Developed LLM-based code analysis tool to detect plagiarism patterns across 500+ submissions
- Built automated pipeline to analyze student code similarity and flag anomalous assignment behaviors for instructor review
- Mentored students in Python, functions, and OOP concepts while supporting programming assignments

ACTIVITIES

Senior Consultant — Senior Advisor

February 2024 – Present

SBC Strategy Consulting

Berkeley, CA

- Built market intelligence models for Adidas Basketball China to evaluate market entry and expansion opportunities
- Developed product strategy for CME Group by translating market research into prioritized product requirements
- Led sourcing efforts to secure consulting projects with Fortune 500 clients, including Adidas and CME Group

Internal Vice President

May 2025 – Present

Taiwanese American Student Association

Berkeley, CA

- Restructured executive board operations, increasing event capacity and boosting attendance across club-wide initiatives
- Coordinated two cabinet board retreats for 35+ members, managing logistics, transportation, and budgeting
- Led weekly meetings to build team cohesion, improve collaboration, and align board members on organizational goals.

PROJECTS

Alumni Directory for TASA Website | Python, Flask, SQLAlchemy, SQLite

May 2026

- Built Flask alumni directory platform supporting 250+ profiles with SQLAlchemy models and admin CRUD workflows
- Developed verification pipeline with Flask-WTF validation and SQLAlchemy constraints to prevent duplicate profiles
- Implemented Alpine.js/Tailwind search and filtering across 6+ alumni attributes for efficient member discovery

Dynamic Social Recovery Protocol | Solidity, Foundry, TypeScript, Node.js, ZK-Email, Lit Protocol

July 2026

- Engineered a zero-database wallet recovery smart contract storing threshold-encrypted guardian payloads directly on-chain
- Integrated ZK-Email TypeScript SDK to validate email DKIM signatures on-chain, eliminating centralized databases
- Implemented 48-hour timelock queue using Foundry fuzzing, achieving 100% test coverage across 50k+ simulated attacks

Cloud-Native Video Processing & Streaming Platform | Typescript, Next.js, Docker, FFmpeg, GCP, Firebase

July 2026

- Engineered asynchronous FFmpeg transcoding pipeline using GCP Pub/Sub, cutting video processing latency by 40%
- Developed Next.js and Firebase serverless API to stream GCS video assets with sub-200ms latency
- Implemented Firebase Auth and Cloud Run service isolation to block 100% of unauthorized upload requests
