

Jeffrey Wang

Berkeley, CA | (323) 804-2198 | github.com/jeffw3558 | jw1@berkeley.edu | linkedin.com/in/jeffreyywangg/

EDUCATION

University of California, Berkeley

Expected December 2027

Bachelor of Arts in Data Science & Economics

GPA: 3.7

- Coursework: Data Structures, Algorithms, Machine Learning, Artificial Intelligence, Data Mining & Analytics, Discrete Math & Probability Theory, Principles & Techniques of Data Science, Linear Algebra

EXPERIENCE

Software Engineer Intern

May 2025 – August 2025

Broctagon Fintech Group

Singapore

- Built FastAPI service over Amazon Bedrock with SSE token streaming and backoff retry; 50 concurrent requests at 800ms
- Benchmarked Claude variants on accuracy, latency, and cost-per-token across 200+ prompts to select the production model
- Cut inference cost 35% by routing low-complexity queries to a smaller model tier and caching system-prompt prefixes

Software Engineer Intern

May 2024 – August 2024

Propulsion AI

Berkeley, CA

- Cut document processing 35% by replacing sequential LLM calls with a 5-permit asyncio semaphore over concurrent workers
- Integrated GROBID with FastAPI to parse 500+ research PDFs into structured XML for LLM extraction
- Built anomaly-detection pass over extracted fields to flag data irregularities and generate surveillance alerts for review

Computer Science Teaching Assistant

January 2024 – May 2024

University of California, Berkeley

Berkeley, CA

- Built plagiarism detection tool over 500+ submissions using AST normalization to score structural code similarity
- Layered LLM adjudication on flagged pairs to cut false positives, surfacing cases for instructor review each assignment cycle
- Led weekly discussion sections and office hours for 8 students on recursion, data abstraction, and OOP design in Python

PROJECTS

Dynamic Social Recovery Protocol | *Solidity, Foundry, TypeScript, ZK-Email, Lit Protocol* | [GitHub](#)

Aug – Sep 2026

- Engineered a zero-database wallet recovery smart contract storing threshold-encrypted guardian payloads directly on-chain
- Integrated ZK-Email TypeScript SDK to validate email DKIM signatures on-chain, eliminating centralized databases
- Implemented 48-hour timelock queue using Foundry fuzzing, achieving 100% test coverage across 50k+ simulated attacks

Cloud Video Processing & Streaming Platform | *TypeScript, Next.js, FFmpeg, GCP, Firebase* | [GitHub](#)

Jun – Jul 2026

- Engineered async FFmpeg transcoding pipeline on Cloud Run workers via GCP Pub/Sub, cutting processing latency 40%
- Built Next.js and Firebase serverless API streaming GCS assets through signed URLs at sub-200ms time-to-first-byte
- Implemented Firebase Auth and Cloud Run service isolation to block 100% of unauthorized upload requests

Alumni Directory for TASA Website | *Python, Flask, SQLAlchemy, SQLite* | [GitHub](#)

May 2026 – Present

- Shipped and maintain a Flask/SQLAlchemy directory in production for a 50-member student org with role-gated CRUD
- Built claim-and-verify flow using Flask validation and DB constraints to block duplicates and unauthorized edits
- Implemented Alpine.js/Tailwind filtering across 6+ indexed attributes, keeping search responsive as the directory grows

ADDITIONAL EXPERIENCE

Technical Product Management

August 2025 – January 2026

CME Group

Chicago, IL

- Built interactive derivatives simulations translating options and futures mechanics into real-time visual dashboards
- Prototyped an AI-driven trading product in Figma integrating live market data, gamification, and educational UX
- Modeled partnership economics across 4 fantasy-sports platforms to scope retail product requirements and roadmap

Berk1337 Cybersecurity Club

August 2026 – Present

Technical Lab Committee

Berkeley, CA

- Implemented GPG key upload/verification for club website as part of broader security remediation efforts
- Cut manual server setup time by 25% by helping build and maintain 1337NET, the club's self-hosted homelab infrastructure, through hands-on sysadmin and DevOps work club managed rack-mounted servers
- Built foundational vulnerability response skills by completing structured analysis of 4 major real-world exploits (EternalBlue, DirtyCOW, ZeroLogon, Log4Shell), through H&C committee training and CTF practice on PicoCTF, HTB, and TryHackMe

Senior Consultant — Senior Advisor

February 2024 – Present

SBC Strategy Consulting

Berkeley, CA

- Built market intelligence models for Adidas Basketball China to evaluate market entry and expansion opportunities
- Developed product strategy for CME Group by translating market research into prioritized product requirements
- Led sourcing efforts to secure consulting projects with Fortune 500 clients, including Adidas and CME Group

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript, TypeScript, HTML/CSS, Solidity, Scheme, SQL

Additional Skills: Git, Docker, React, Node.js, PostgreSQL, MongoDB, AWS Lambda, Firestore, Postman, pandas, Firebase, PyTorch, TensorFlow, Flask, agile, Rest API, NumPy, Matplotlib, Google Cloud, Next.js, Express.js, Alpine.js
